The time period for reply, if any, is set in the attached communication.

Office Action Summary

Application No.

10/593,352

Applicant(s)

SMITH ET AL.

Examiner

ANISH GUPTA

Art Unit

1654

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 2 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-7 is/are pending in the application.
- 4a) Of the above claim(s) ____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) ____ is/are allowed.
- 6) ☒ Claim(s) 1-7 is/are rejected.
- 7) ☐ Claim(s) ____ is/are objected to.
- 8) ☐ Claim(s) ____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on ____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. ____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☒ Notice of Draftperson's Patent Drawing Review (PTO-948)
- 3) ☒ Information Disclosure Statement(s) (PTO/SB/22)
Paper No(s)/Mail Date 5/29/07
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date ____
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: ____

DETAILED ACTION
Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

1. Claims 1-3 and 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sousa et al. in view of Schwab et al. (Animicrob. Agents Chemother.).

The claims are drawn to ophthalmic solution comprising a peptide of SEQ ID NO 1, NO 2 or NO. 3.

Sousa et al. teach ophthalmic formulations that contain a synthetic cecropin peptide D5C. The reference specifically teaches three different commercially available contact lens cleaning solutions to which 100 µg/mL was added (see material and methods on page 115). The solutions utilized were “Renu Multi-Purpose Solution,” containing boric acid, edentate disodium, poloxamine, sodium borate, sodium chloride, and polyaminopropyl biguanide .000005% as a

Art Unit: 1654

preservative; "Complete All-In-One Solution" containing sodium chloride, polyhexamethylene biguanide, tromethamine, Tyloxapol, and edetate disodium; and "Opti-Free" which contains citrate buffer and sodium chloride, edetate disodium .05% and polyquaternium-1 .0001% (see page 115). Note that the three solutions utilize a buffer recited in claim 3 and the Renu Multi-Purpose Solution contains a poloxamine, which is a polyoxyethylene surfactant. The reference teaches that the three solutions, by themselves, were effective against *P. aeruginosa*. However, the addition of the cecropin peptide augmented their antimicrobial activity in the presence of the contact lens (see abstract). More specifically, the reference states that 100 µg/mL of D5C added to Renu Solution and the Complete solution, both of which contain the biguanide, enhanced antibacterial activity against *P. aeruginosa* (See page 117). The difference between the prior art and the instant application is that the reference does not teach the use of any of the specific peptides claimed.

However, Schwab et al. teaches conducts antimicrobial activity experiments against *P. aeruginosa* using designed antimicrobial peptides (DAPs) in different buffers (see abstract). The DAPS specifically utilized include D2A21, D4E1 and D5C (see page 1436). It should be noted that D2A21 and D4E1 correspond to SEQ ID NO 2 and SEQ ID NO 1 of the claimed invention. The reference discloses results which indicate that both D4E1 and D2A21 demonstrate the highest antimicrobial activity against *P. aeruginosa* (see page 1436, figure 2). While the conclusions are for patients with cystic fibrosis, the reference concludes that DAPs are attractive as therapeutic agents because their activities do not appear to be diminished over a wide range of osmolarities. Therefore, it would have been obvious to one of ordinary skill in the art to use D2A21 or D4E1 with the Renu and Complete ophthalmic solutions of Sousa et al. because both D2A21 or D4E1 had more antimicrobial activity against *P. aeruginosa*. There would have been a reasonable expectation of

success because both D2A21 and D4E1 are designed antimicrobial peptides that are active against *P. aeruginosa* similar to D5C.

2. Claims 1-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over De Bruij et al. (WO0007634) in view of Schwab et al. (Animicrob. Agents Chemother.).

The claims are drawn to ophthalmic solution comprising a peptide of SEQ ID NO 1, NO 2 or NO. 3.

De Bruij et al. teaches numerous contact lens solutions which contain an antimicrobial and are active against different microbes including *P. aeruginosa*. The reference specifically disclose the use of Benzyltrimethyl [2-[2-(p-1,1,3,3-tetramethylbutylphenoxy)ethoxy]ethyl] ammonium chloride as the antimicrobial agent. The reference also discloses the addition of various agent to enhance compatibility with the eye. For example, the reference disclose the use of buffers such as citrate, borate, HEPPS, HEPES and the like to avoid irritation and sting to the eye (see page 7, lines 14-22). The reference also teaches that sequestering agents such as gluconate or tartarate can be utilized as preservatives, disinfectants or cleaning solutions (see page 8, lines 5-11). The reference states that decanedioic acid improves ocular comfort of contact lens solutions. The reference disclose the addition of glycerin .2% and .2% decanedioic acid (see example 4 and 5). The reference also states that glycerin improves the kill of *P. aeruginosa* (see page 12, example 3). The difference between the prior art and the instant application is that the reference does not teach the use of any of the specific peptides claimed.

However, Schwab et al. teaches conducts antimicrobial activity experiments against *P. aeruginosa* using designed antimicrobial peptides (DAPs) in different buffers (see abstract). The DAPS specifically utilized include D2A21, D4E1 and D5C (see page 1436). It should be noted that

D2A21 and D4E1 correspond to SEQ ID NO 2 and SEQ ID NO 1 of the claimed invention. The reference discloses results which indicate that both D4E1 and D2A21 demonstrate the highest antimicrobial activity against *P. aeruginosa* (see page 1436, figure 2). While the conclusions are for patients with cystic fibrosis, the reference concludes that DAPs are attractive as therapeutic agents because their activities do not appear to be diminished over a wide range of osmolarities. Therefore, it would have been obvious to one of ordinary skill in the art to use D2A21 or D4E1 with the Renu and Complete ophthalmic solutions of Sousa et al. because both D2A21 or D4E1 had more antimicrobial activity against *P. aeruginosa*. There would have been a reasonable expectation of success because both D2A21 and D4E1 are designed antimicrobial peptides that are active against *P. aeruginosa* similar to D5C.

3. Claims 1-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sousa et al. in view of Schwab et al. (Antimicrob. Agents Chemother.) in further view of De Bruijn et al.

The claims are drawn to ophthalmic solution comprising a peptide of SEQ ID NO 1, NO 2 or NO. 3.

The references of Sousa et al. in view of Schwab et al. have been discussed supra and their motivation for combination has been discussed supra. The difference between the prior art and the instant application is that the reference does not teach ophthalmic formulations as claimed, with the specific buffer, preservative, wetting agents etc...

De Bruijn et al. teaches numerous contact lens solutions which contain an antimicrobial and are active against different microbes including *P. aeruginosa*. The reference specifically disclose the use of Benzyltrimethyl [2-[2-(p-1,1,3,3-tetramethylbutylphenoxy)ethoxy]ethyl] ammonium chloride as the antimicrobial agent. The reference also discloses the addition of various agent to enhance

compatibility with the eye. For example, the reference disclose the use of buffers such as citrate, borate, HEPES, HEPES and the like to avoid irritation and sting to the eye (see page 7, lines 14-22). The reference also teaches that sequestering agents such as gluconate or tartarate can be utilized as preservatives, disinfectants or cleaning solutions (see page 8, lines 5-11). The reference states that decanedioic acid improves ocular comfort of contact lens solutions. The reference disclose the addition of glycerin .2% and .2% decanedioic acid (see example 4 and 5). The reference also states that glycerin improves the kill of *P. aeruginosa* (see page 12, example 3). It would have been obvious to use an ophthalmic formulation as taught in De Bruju because it achieves a formulation that is compatible with the eye. The reference provides motivation to use gluconate or tartarate to be used as preservatives, disinfectants or cleaning solutions, specific buffers to avoid irritation and sting to the eye, glycerin to improves the kill of *P. aeruginosa* and decanedioic acid to improve ocular comfort of contact lens solutions.

4. The reference of Huth et al. and Sajjan et al. have been cited as being pertinent to Applicants disclosure.

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to ANISH GUPTA whose telephone number is (571)272-0965. The examiner can normally be reached on 5/4/9.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Tsang Cecilia can be reached on 571-272-0562. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
